4. Feature Column with Gold, Random Pattern Hot Metal®.

## HOT METAL®: THE REVOLUTIONARY METAL LAMINATE WITH STRIKING 3D EFFECTS

**S**TEW® Pty Ltd is under the spotlight for producing a high quality metal laminate called Hot Metal®. It is the first aluminium laminate process in Australia to give a finish with stunning, mobile 3-D effects and it has opened up a range of creative opportunities for those wanting to produce structures with an innovative appearance.

Hot Metal® is unique in its look and was developed to offer the architectural, design and building industries a versatile, affordable and durable metal laminate appropriate for numerous applications. Using patented technology, Hot Metal® produces specialised finishes on aluminium sheets - created by a combination of transparent colour coatings and handcrafted patterns. The result is a contemporary, striking

and powerful effect, which brings life to every application and design.

Hot Metal® has been developed for internal vertical applications and decorative horizontal surfaces. Highly durable, it can be applied to most surfaces or substrates, curved around columns, folded as in ceiling tiles, laser embossed and cut with ease. It is light weight, cost effective, and responds dramatically to light.

Hot Metal® represents the ultimate in creative control as it offers movement, refraction and exciting illusions when viewed from different angles. Hot Metal® can be customised to suit individual needs, has been fire rated to comply with strict Australian standards, requires little maintenance and is a recyclable and environmentally sound product.
